Original Essay

The two maps compares the current layout of the industrial area in the town of Norbiton with a future plan to develope the same area.

It is clear that there are no more factories in the future. The planned design involves building more housings and other facilities to replace the factories, and develop the current transportation.

The transportation will dramatically develope by building a road to connect the northwestern area and redesigning the crossing to the south .There will be a bridge over the river to connect the farmland, and the farmland will no longer be separated by the river. Then a new housing will be built to the north of the town as well.

The industrial area will be a residential zone with more housings along the roads. Moreover, many facilities for residents will be built adjacent to the roads. The school will be installed to the east of the town, and the shops and medical centre will be located in the central area.

Grammar & Spelling Check

Case 1

Original: The two maps **compares**

Corrected: The two maps **compare**

Reason: Subject-verb agreement error. “Maps” is plural, so the verb should be “compare”.

Case 2

Original: to **develope** the same area

Corrected: to **develop** the same area

Reason: Spelling mistake.

Case 3

Original: more **housings**

Corrected: more **housing**

Reason: “Housing” is an uncountable noun and should not be pluralized in this context.

Case 4

Original: current transportation

Corrected: current **transport system**

Reason: “Transportation” is unnatural here; “transport system” is more accurate and academic.

Case 5

Original: will dramatically **develope**

Corrected: will dramatically **develop**

Reason: Spelling mistake.

Case 6

Original: redesigning the crossing to the south **.There**

Corrected: redesigning the crossing to the south. **There**

Reason: Incorrect spacing and punctuation.

Case 7

Original: a new housing will be built

Corrected: a new **housing area** will be built

Reason: “Housing” alone cannot normally refer to a single building or area.

Case 8

Original: The industrial area will be a residential zone with more housings

Corrected: The industrial area will become a residential zone with more housing

Reason: “Become” is more natural, and “housing” should remain uncountable.

Case 9

Original: The school will be installed

Corrected: The school will be **built**

Reason: “Installed” is not appropriate for buildings.

Score Improvement Suggestions

Case 1

Original: The transportation will dramatically develop

Corrected: The transport infrastructure will be significantly improved

Reason: This expression is more formal and suitable for IELTS Task 1.

Case 2

Original: There are no more factories in the future

Corrected: All factories are planned to be removed in the future development

Reason: This sounds more precise and academic.

Case 3

Original: many facilities for residents

Corrected: a range of public facilities for residents

Reason: “A range of” improves lexical variety.

Vocabulary Enhancement

Case 1

Original: develop

Corrected: expand, improve, transform, upgrade

Case 2

Original: housing

Corrected: residential area, accommodation, housing development

Case 3

Original: facilities

Corrected: amenities, public services, infrastructure

Case 4

Original: connect

Corrected: link, join, provide access to

Corrected Essay

The two maps compare the current layout of the industrial area in the town of Norbiton with a future plan to develop the same area.

It is clear that there will be no factories in the future. The proposed design involves constructing more housing and public facilities to replace the factories, while also improving the transport system.

The transport infrastructure will be significantly improved by building a new road to connect the northwestern area and redesigning the intersection in the south. In addition, a bridge will be constructed over the river to connect both sides of the farmland, meaning that the river will no longer separate the area. A new housing area will also be built to the north of the town.

The industrial area will become a residential zone with more housing along the roads. Moreover, a range of facilities for residents will be constructed beside the roads. A school will be built to the east of the town, while shops and a medical centre will be located in the central area.
