Original Essay

The line graph compares the goods transported between four different modes of transport in UK from 1974 to 2002.

It's clear that road was the most important way for goods transporting, while the quantities of goods that pipeline transported was the lowest.Besides rail, the other three modes of transport kept a upward trend over a period of 28 years.

In 1974, the quantities of goods transported by road was about 70 million tones which was undoubtly the most one.Water and rail transported around 40 million tones goods each, and pipeline provided a negligible amount.Just four years later water cought up with rail, and transported more 20 million tones goods than in the next four years.

The the quantities of goods that rail transported was still nearly 40 million tones, equal to the quantities in 1974 itself.As for water and pipeline, the quantities rose about 20 million tones for each during 28 years, and the most important rising took place during between 1978 and 1982.

Grammar & Spelling Check

Case 1

Original: in UK

Corrected: in **the** UK

Reason: The country name “UK” requires the definite article “the”.

Case 2

Original: goods transporting

Corrected: **transporting goods**

Reason: Incorrect word order.

Case 3

Original: was the lowest

Corrected: **were** the lowest

Reason: Subject-verb agreement error because “quantities” is plural.

Case 4

Original: a upward trend

Corrected: **an** upward trend

Reason: “Upward” begins with a vowel sound.

Case 5

Original: tones

Corrected: **tonnes**

Reason: Incorrect spelling of the measurement unit.

Case 6

Original: undoubtly

Corrected: **undoubtedly**

Reason: Spelling mistake.

Case 7

Original: cought up

Corrected: **caught up**

Reason: Incorrect past tense spelling.

Case 8

Original: transported more 20 million tones goods

Corrected: transported **20 million more tonnes of goods**

Reason: Incorrect word order and missing preposition.

Case 9

Original: The the quantities

Corrected: **The quantities**

Reason: Repeated word error.

Case 10

Original: rose about 20 million tones

Corrected: rose **by** about 20 million tonnes

Reason: The verb “rise” requires the preposition “by” when describing changes in amount.

Case 11

Original: during between 1978 and 1982

Corrected: **between 1978 and 1982**

Reason: “During” is unnecessary here.

Sentence-by-Sentence Review

Case 1

Original

The line graph compares the goods transported between four different modes of transport in UK from 1974 to 2002.

Corrected

The line graph compares the quantity of goods transported by four different modes of transport in **the** UK from 1974 to 2002.

Reason

“By” is more appropriate than “between,” and “the UK” requires an article. “Quantity” is also more natural in academic writing.

Case 2

Original

It's clear that road was the most important way for goods transporting, while the quantities of goods that pipeline transported was the lowest.

Corrected

It is clear that road transport was the most important method of **transporting goods**, while the quantity of goods transported by pipeline was the lowest.

Reason

More formal academic language is needed in IELTS Task 1. The sentence structure was also simplified for clarity.

Case 3

Original

Besides rail, the other three modes of transport kept a upward trend over a period of 28 years.

Corrected

Apart from rail, the other three modes of transport showed **an** upward trend over the 28-year period.

Reason

“Showed an upward trend” is more natural and academic than “kept an upward trend”.

Case 4

Original

In 1974, the quantities of goods transported by road was about 70 million tones which was undoubtly the most one.

Corrected

In 1974, the quantity of goods transported by road was about 70 million **tonnes**, which was undoubtedly the highest figure.

Reason

Corrected spelling, punctuation, and unnatural expression (“the most one”).

Case 5

Original

Water and rail transported around 40 million tones goods each, and pipeline provided a negligible amount.

Corrected

Water and rail each transported around 40 million tonnes of goods, while pipeline transport accounted for only a negligible amount.

Reason

Improved word order and more appropriate academic vocabulary.

Case 6

Original

Just four years later water cought up with rail, and transported more 20 million tones goods than in the next four years.

Corrected

Just four years later, water transport caught up with rail and then transported 20 million more tonnes of goods over the following four years.

Reason

Corrected spelling, punctuation, and awkward phrasing.

Case 7

Original

The the quantities of goods that rail transported was still nearly 40 million tones, equal to the quantities in 1974 itself.

Corrected

The quantity of goods transported by rail was still nearly 40 million tonnes, which was similar to the figure in 1974.

Reason

Removed repeated word, corrected grammar, and improved cohesion.

Case 8

Original

As for water and pipeline, the quantities rose about 20 million tones for each during 28 years, and the most important rising took place during between 1978 and 1982.

Corrected

As for water and pipeline transport, the quantities rose by about 20 million tonnes each over the 28-year period, and the most significant increase took place between 1978 and 1982.

Reason

Corrected grammar, spelling, and vocabulary choice.

Score Improvement Suggestions

Case 1

Original: the most important way

Corrected: the dominant mode of transport

Reason: “Dominant mode of transport” is more formal and suitable for IELTS Task 1.

Case 2

Original: kept an upward trend

Corrected: showed a gradual upward trend

Reason: More natural and academic phrasing.

Case 3

Original: provided a negligible amount

Corrected: accounted for the smallest proportion

Reason: More precise vocabulary for data description.

Vocabulary Enhancement

Case 1

Original: important

Corrected: dominant, major, significant

Case 2

Original: rising

Corrected: increase, growth, upward trend

Case 3

Original: transported

Corrected: carried, conveyed, delivered

Corrected Essay

The line graph compares the quantity of goods transported by four different modes of transport in the UK from 1974 to 2002.

It is clear that road transport was the dominant mode of transporting goods throughout the period, while pipeline transport accounted for the smallest quantity. Apart from rail, the other three modes generally showed an upward trend over the 28 years.

In 1974, the quantity of goods transported by road was about 70 million tonnes, which was by far the highest figure. Water and rail each transported around 40 million tonnes of goods, while pipeline transport accounted for only a negligible amount. Four years later, water transport caught up with rail and then increased by about 20 million tonnes over the following four years.

The quantity of goods transported by rail remained at nearly 40 million tonnes, which was similar to the figure in 1974. As for water and pipeline transport, both figures rose by about 20 million tonnes over the 28-year period, and the most significant increase took place between 1978 and 1982.
