Original Essay

The line graph compares the consumption of fish and other three different kinds of meat with four lines in a European country over the 25-year period.

In 1979, beef was the most important kind of consumption, nearly 4 times the figure of fish, which accounted for the smallest proportion.At the same time, the figure of chicken and lamb consumption was about 150 grams per person per week.

Chicken took over lamb and beef separately in 1980 and 1989, even reached 250 grams per person per week in 2004, which was undoubtedly domain method.While beef and lambdecreased by nearly 100 grams per person per week from 1979 to 2004, showing a dramatically downward trend.

Thought the only huge growth was made by chicken, the consumption of fish nearly kept at the figure of 50 grams per person per week, with a negligible decreasing trend.And the figure was very closed to the consumption of lamb in 2004.

Grammar & Spelling Check

Case 1

Original: other three different kinds of meat

Corrected: **the other three different kinds of meat**

Reason: Missing article “the”.

Case 2

Original: with four lines

Corrected: **using four lines**

Reason: “Using” is more natural and accurate in graph descriptions.

Case 3

Original: the most important kind of consumption

Corrected: **the most widely consumed type of meat**

Reason: “Important kind of consumption” is unnatural phrasing.

Case 4

Original: accounted for the smallest proportion.At

Corrected: **accounted for the smallest proportion. At**

Reason: Missing space after the full stop.

Case 5

Original: Chicken took over lamb and beef separately

Corrected: **Chicken consumption overtook lamb and beef respectively**

Reason: “Took over” is inappropriate in this context.

Case 6

Original: even reached 250 grams

Corrected: **and even reached 250 grams**

Reason: Missing conjunction for sentence cohesion.

Case 7

Original: which was undoubtedly domain method

Corrected: **making it the dominant meat type**

Reason: Original phrase is grammatically incorrect and unclear.

Case 8

Original: lambdecreased

Corrected: **lamb decreased**

Reason: Missing space.

Case 9

Original: showing a dramatically downward trend

Corrected: **showing a dramatic downward trend**

Reason: Incorrect adjective/adverb form.

Case 10

Original: Thought the only huge growth was made by chicken

Corrected: **Although the only significant growth was seen in chicken consumption**

Reason: “Thought” should be “Although”, and the sentence structure is inaccurate.

Case 11

Original: nearly kept at the figure of 50 grams

Corrected: **remained at around 50 grams**

Reason: More natural academic expression.

Case 12

Original: And the figure was very closed to the consumption of lamb

Corrected: **and this figure was very close to that of lamb consumption**

Reason: “Closed” should be “close”; improve comparison structure.

Score Improvement Suggestions

Case 1

Original: the most important kind of consumption

Corrected: **the most widely consumed type of meat**

Reason: Use more precise and academic vocabulary.

Case 2

Original: took over

Corrected: **overtook**

Reason: “Overtook” is the standard verb for trends in IELTS Task 1.

Case 3

Original: huge growth

Corrected: **significant increase**

Reason: “Significant increase” sounds more formal and academic.

Case 4

Original: nearly kept at the figure of

Corrected: **remained at around**

Reason: More concise and natural expression.

Vocabulary Enhancement

Case 1

Original: compares

Corrected: **illustrates / depicts / presents**

Case 2

Original: important

Corrected: **dominant / widely consumed / major**

Case 3

Original: huge growth

Corrected: **significant increase / substantial rise**

Case 4

Original: downward trend

Corrected: **declining trend / gradual decrease**

Corrected Essay

The line graph compares the consumption of fish and the other three different kinds of meat in a European country over a 25-year period.

In 1979, beef was the most widely consumed type of meat, at nearly four times the figure for fish, which accounted for the smallest proportion. At the same time, the figures for chicken and lamb consumption were about 150 grams per person per week.

Chicken consumption overtook lamb and beef in 1980 and 1989 respectively, and even reached 250 grams per person per week in 2004, making it the dominant meat type. Meanwhile, beef and lamb decreased by nearly 100 grams per person per week from 1979 to 2004, showing a dramatic downward trend.

Although the only significant growth was seen in chicken consumption, fish consumption remained at around 50 grams per person per week, with only a slight downward trend. In 2004, this figure was very close to that of lamb consumption.
