## Band Score

**Band 6.0**

## Question

The most important aim of science should be to improve people's lives. To what extent do you agree or disagree with this statement? Give reasons for your answer and include any relevant examples from your own knowledge or experience.

## Original Essay

The aims of science could be vary, such as exploring future, earning money and so on. From my point of view, I completly agree that the most important aim of science should be to improve people's live, so that people can enjoy a more convenient and peaceful life with the development of science.

Human beings can save more time and energy by reducing some repetitive and meaningless work. Althought unemployment is a inevitable problem in short term, I believe this situation would be eased in the future. With the help of advanced technology and science, there will be more and more jobs taken place by robots and other technology. In this case, people can short their working time and avoid doing dangerous job, which can greately improve the satisfaction of workers. I have seen a lot of industries could run successfully without human, traditional factories and self-driving vehicles have made exciting progress.

Improving people's lives is the main and final purpose of science. We will enjoy more efficient and convenient infrastructures by deploying useful technology. As we all known, the number and speed of planes and trains are rising day by day, and internet has changed our lifestyle exactly. Most people are not concernd about the future, they just want to enjoy everyday life. So the final aim of science must be to meet majorities' demand.

In conclusion, my view is that the most important aim of science should be to improve people's lives. Advanced technology would help people with repetitive and dangerous word, and science would meet majorities' demands to improve the quality of life in the future.

## Grammar & Spelling Check

**Case 1**

Original: The aims of science could be vary

Corrected: The aims of science could **vary**

Reason: After the modal verb “could,” the base form of the verb should be used.

**Case 2**

Original: exploring future

Corrected: exploring **the** future

Reason: Missing article “the.”

**Case 3**

Original: I completly agree

Corrected: I **completely** agree

Reason: Spelling mistake.

**Case 4**

Original: improve people's live

Corrected: improve people's **lives**

Reason: Incorrect plural form.

**Case 5**

Original: Althought unemployment is a inevitable problem in short term

Corrected: **Although** unemployment is **an** inevitable problem in **the** short term

Reason: Spelling, article, and expression errors.

**Case 6**

Original: jobs taken place by robots

Corrected: jobs **replaced** by robots

Reason: Incorrect phrase usage.

**Case 7**

Original: people can short their working time

Corrected: people can **shorten** their working hours

Reason: Incorrect verb form and unnatural collocation.

**Case 8**

Original: dangerous job

Corrected: dangerous **jobs**

Reason: Plural noun required.

**Case 9**

Original: greately improve

Corrected: **greatly** improve

Reason: Spelling mistake.

**Case 10**

Original: industries could run successfully without human

Corrected: industries could run successfully without **humans**

Reason: Incorrect noun form.

**Case 11**

Original: As we all known

Corrected: As we all **know**

Reason: Incorrect verb form.

**Case 12**

Original: and internet has changed our lifestyle exactly

Corrected: and **the** internet has changed our lifestyle **significantly**

Reason: Missing article and inappropriate word choice.

**Case 13**

Original: not concernd about the future

Corrected: not **concerned** about the future

Reason: Spelling mistake.

**Case 14**

Original: majorities' demand

Corrected: **the majority's demands**

Reason: Incorrect possessive form and noun usage.

**Case 15**

Original: dangerous word

Corrected: dangerous **work**

Reason: Wrong word choice.

---

## Sentence-by-Sentence Review

**Sentence 1**

Original: The aims of science could be vary, such as exploring future, earning money and so on.

Corrected: The aims of science could **vary**, such as exploring **the** future, earning money, and so on.

Reason: Correct verb form, article usage, and punctuation.

**Sentence 2**

Original: From my point of view, I completly agree that the most important aim of science should be to improve people's live, so that people can enjoy a more convenient and peaceful life with the development of science.

Corrected: From my point of view, I **completely** agree that the most important aim of science should be to improve people's **lives**, so that people can enjoy a more convenient and peaceful life through the development of science.

Reason: Spelling correction and more natural expression.

**Sentence 3**

Original: Human beings can save more time and energy by reducing some repetitive and meaningless work.

Corrected: Human beings can save more time and energy by reducing repetitive and meaningless work.

Reason: “Some” is unnecessary here.

**Sentence 4**

Original: Althought unemployment is a inevitable problem in short term, I believe this situation would be eased in the future.

Corrected: **Although** unemployment is **an** inevitable problem in **the** short term, I believe this situation **will** be eased in the future.

Reason: Spelling, article usage, and more appropriate tense.

**Sentence 5**

Original: With the help of advanced technology and science, there will be more and more jobs taken place by robots and other technology.

Corrected: With the help of advanced technology and science, more and more jobs will be **replaced** by robots and other forms of technology.

Reason: Incorrect phrase and unnatural wording.

**Sentence 6**

Original: In this case, people can short their working time and avoid doing dangerous job, which can greately improve the satisfaction of workers.

Corrected: In this case, people can **shorten** their working hours and avoid doing dangerous **jobs**, which can **greatly** improve workers' satisfaction.

Reason: Grammar, spelling, and collocation improvements.

**Sentence 7**

Original: I have seen a lot of industries could run successfully without human, traditional factories and self-driving vehicles have made exciting progress.

Corrected: I have seen that many industries can run successfully without **humans**; traditional factories and self-driving vehicles have made exciting progress.

Reason: Sentence structure and grammar correction.

**Sentence 8**

Original: Improving people's lives is the main and final purpose of science.

Corrected: Improving people's lives is the main and ultimate purpose of science.

Reason: “Ultimate” is more academic than “final.”

**Sentence 9**

Original: We will enjoy more efficient and convenient infrastructures by deploying useful technology.

Corrected: We will enjoy more efficient and convenient infrastructure through the use of advanced technology.

Reason: “Infrastructure” is generally uncountable.

**Sentence 10**

Original: As we all known, the number and speed of planes and trains are rising day by day, and internet has changed our lifestyle exactly.

Corrected: As we all **know**, the number and speed of planes and trains are increasing day by day, and **the** internet has changed our lifestyle **significantly**.

Reason: Grammar, article usage, and word choice.

**Sentence 11**

Original: Most people are not concernd about the future, they just want to enjoy everyday life.

Corrected: Most people are not **concerned** about the future; they just want to enjoy everyday life.

Reason: Spelling and punctuation correction.

**Sentence 12**

Original: So the final aim of science must be to meet majorities' demand.

Corrected: Therefore, the ultimate aim of science must be to meet **the majority's demands**.

Reason: Grammar and more formal vocabulary.

**Sentence 13**

Original: In conclusion, my view is that the most important aim of science should be to improve people's lives.

Corrected: In conclusion, I believe that the most important aim of science should be to improve people's lives.

Reason: More natural academic style.

**Sentence 14**

Original: Advanced technology would help people with repetitive and dangerous word, and science would meet majorities' demands to improve the quality of life in the future.

Corrected: Advanced technology can help people with repetitive and dangerous **work**, and science can meet **the majority's demands** to improve the quality of life in the future.

Reason: Word choice and grammar correction.

---

## Task Response Check

You **did not miss the topic**, and your position is clear throughout the essay. However, your ideas are sometimes too general and lack specific examples. The essay would score higher if:

- You explained your ideas in greater depth.
- You used clearer and more realistic examples.
- You developed the argument about unemployment and technology more logically.
- You avoided repeating the same idea (“improving lives”) without detailed support.

---

## Score Improvement Suggestions

**Case 1**

Original: people can enjoy a more convenient and peaceful life

Corrected: people can benefit from safer healthcare, faster transportation, and improved communication

Reason: More specific examples make the argument stronger.

**Case 2**

Original: industries could run successfully without humans

Corrected: automated factories and AI-powered transport systems can operate more efficiently with minimal human involvement

Reason: More precise and academic vocabulary.

**Case 3**

Original: science must be to meet the majority's demands

Corrected: science should focus on solving practical problems that directly improve people's quality of life

Reason: Clearer and more natural expression.

---

## Vocabulary Enhancement

**Case 1**

Original: convenient life

Corrected: comfortable lifestyle / higher quality of life

**Case 2**

Original: exciting progress

Corrected: significant progress / remarkable development

**Case 3**

Original: useful technology

Corrected: advanced technology / innovative technology

**Case 4**

Original: improve people's lives

Corrected: enhance human well-being / improve quality of life

---

## Corrected Essay

The aims of science could vary, such as exploring the future, generating profits, and many others. However, from my perspective, I completely agree that the most important aim of science should be to improve people's lives, allowing individuals to enjoy a safer, more convenient, and peaceful life through scientific development.

Human beings can save time and energy by reducing repetitive and meaningless work. Although unemployment may become an inevitable problem in the short term, I believe this issue will gradually be eased in the future. With the development of advanced technology, more and more jobs will be replaced by robots and automated systems. As a result, people can shorten their working hours and avoid dangerous tasks, which can greatly improve workers' satisfaction and safety. For example, automated factories and self-driving vehicles have already made remarkable progress in many industries.

Improving people's lives should be the main and ultimate purpose of science. People can benefit from more efficient transportation systems, better communication methods, and improved public infrastructure through scientific innovation. As we all know, the speed and availability of trains and airplanes continue to increase, while the internet has significantly changed modern lifestyles. Most people care more about living comfortably in the present than about abstract scientific achievements. Therefore, science should focus on solving practical problems and improving the overall quality of life for the majority of people.

In conclusion, I strongly agree that the primary aim of science should be to improve people's lives. Advanced technology can reduce repetitive and dangerous work, while scientific progress can satisfy people's practical needs and create a better future for society.
